

Narendar Reddy Anugu

(DevOps/Cloud Engineer)

Email: anugunarendarreddy2@gmail.com

Phone: 469-545-0243

LinkedIn: <https://www.linkedin.com/in/narendarreddyanugu/>

PROFESSIONAL SUMMARY:

- Cloud and DevOps Engineer with 11+ years of IT experience, including **7+ years in DevOps** and cloud engineering and **4+ years in Linux systems** administration, specializing in enterprise Microsoft Azure platform engineering, infrastructure automation, Kubernetes, governance, and production operations.
- Experienced in designing, deploying, and supporting secure, scalable, and highly available cloud platforms across **Microsoft Azure and Amazon Web Services (AWS)**, with exposure to multi-cloud architecture, governance, networking, identity, security, and disaster recovery.
- Strong experience developing enterprise CI/CD solutions using **GitHub Actions, Azure DevOps** Pipelines, GitLab CI/CD, Jenkins, AWS CodePipeline, and CodeBuild, including reusable workflows, deployment automation, security validation, and release governance.
- Proficient in Infrastructure-as-Code and configuration management using **Terraform, Azure Bicep, Azure Verified Modules, AWS CloudFormation, Ansible**, Azure CLI, AWS CLI, PowerShell, Bash, and Python to deliver repeatable and standardized infrastructure deployments.
- Hands-on experience administering container platforms including Azure **Kubernetes Service (AKS)**, Amazon EKS, Kubernetes, and OpenShift, with expertise in Docker, Helm, ArgoCD, Rancher, Kustomize, GitOps, autoscaling, ingress, RBAC, networking, and container security.
- Built and supported enterprise observability and monitoring solutions using Azure Monitor, Amazon CloudWatch, **Prometheus, Grafana, Dynatrace, Datadog**, Application Insights, Log Analytics, OpenTelemetry, Loki, Fluent Bit, Splunk, and KQL.
- Experienced in Site Reliability Engineering practices including **24x7 production support**, on-call leadership, incident and change management, alerting, troubleshooting, Root Cause Analysis, SLIs/SLOs, operational readiness, Business Continuity Planning, disaster recovery, and service reliability improvements.
- Implemented **DevSecOps and Secure Systems** Development Lifecycle practices through Policy-as-Code, security scanning, secrets detection, artifact validation, compliance controls, IAM, Microsoft Entra ID, Managed Identities, Key Vault, AWS Secrets Manager, and secure CI/CD workflows.
- Supported enterprise data and **AI platforms** including Azure Data Factory, **Azure Databricks**, Azure AI Foundry, Azure OpenAI, Anthropic Claude, Amazon Bedrock, and cloud-native AI proof-of-concept environments.
- Proven ability to collaborate with Development, **Cybersecurity, DevSecOps**, Architecture, and Operations teams while mentoring engineers, developing reusable templates and operational runbooks, and driving cloud adoption, automation, Agile delivery, and operational excellence.

EDUCATION:

Bachelor's in computer science from JNTUH in 2012.

TECHNICAL SKILLS:

Cloud Platforms	Microsoft Azure, Amazon Web Services (AWS), Google Cloud Platform (GCP)
AWS Services	RDS, EC2, VPC, IAM, Cloud Formation, EBS, S3, ELB, Auto Scaling, Cloud Trail, SQS, SNS, SWF, Cloud Watch.

Azure Services	App Services, Key vault, function app, Blob storage, Azure Active Directory (Azure AD), Service Bus, Azure Container Registry (ACR) and Azure Kubernetes Service (AKS), Azure SQL, Azure Cosmos DB.
Infrastructure as a code	Terraform, Azure Bicep, Azure Verified Modules (AVM), AWS CloudFormation, ARM Templates
ITSM & Collaboration	ServiceNow, Jira, Azure Boards, Confluence, SharePoint, Microsoft Teams, PagerDuty, Slack
Tracking Tools	Jira, Azure Boards, Service now.
DevSecOps & Code Scanning	SonarQube, JFrog Xray, Fortify, SAST, DAST, secrets detection, artifact validation, Policy-as-Code
Databases	Azure SQL Database, SQL Server, Amazon RDS, PostgreSQL, MySQL, Cosmos DB, Snowflake, Azure Databricks, Azure Data Factory.
Version Control Tools	Git, GitHub Enterprise, GitLab, Bitbucket, Azure Repos
CI/CD and DevOps	GitHub Actions, Azure DevOps Pipelines, GitLab CI/CD, Jenkins, AWS CodePipeline, AWS CodeBuild, TeamCity, Bamboo
Configuration	Ansible, Chef, Puppet
Container Platforms	Docker, Kubernetes, Open Shift, AKS, EKS, Helm, Karpenter
Monitoring Tools	Prometheus, Grafana, Azure Monitor, Amazon CloudWatch, Dynatrace, Datadog, OpenTelemetry, Application Insights, Log Analytics, Loki, Fluent Bit, Splunk, Nagios
Logging	Kusto Query Language (KQL), PromQL, LogQL, Azure Log Analytics, CloudWatch Logs
Scripting & Programming Operating Systems & Web Servers	Python, PowerShell, Bash, Shell Scripting, Go, Java, YAML, JSON Linux, RHEL, Ubuntu, CentOS, Windows Server, Nginx, IIS

CERTIFICATIONS:

- Microsoft Certified Azure Administrator
- Certified Kubernetes Administrator
- AWS Developer – Associate
- Terraform associated.

PROFESSIONAL EXPERIENCE:

Client: Deloitte, USA

Jan 2025 – Till Date

Role: Sr Azure Cloud DevOps Engineer

Responsibilities

- Designed and implemented enterprise DevOps strategies within **Azure environments**, enabling secure collaboration, CI/CD automation, infrastructure provisioning, monitoring, and feedback loops across multiple engineering teams.
- Managed **GitHub Enterprise** CI/CD pipelines using GitHub Actions, **Azure DevOps** Pipelines, reusable workflows, composite actions, and Policy-as-Code to automate secure infrastructure and application deployments.
- Collaborated with Development, **DevSecOps**, and Cybersecurity teams to enforce Secure Systems Development Lifecycle (SSDLC) practices, including automated security validation, compliance checks, secure coding standards, secrets detection, and artifact validation.

- Developed reusable Infrastructure-as-Code using **Bicep**, **Azure Verified Modules (AVM)**, Azure CLI, and PowerShell to standardize enterprise Azure deployments and automate infrastructure provisioning across multiple environments.
- Served as the primary administrator for the enterprise **Azure Monitor Alerts** repository, developing reusable Bicep modules, **GitHub Actions** workflows, and standardized Azure Monitor alerting frameworks including Metric Alerts, Log Alerts, Activity Log Alerts, Scheduled Query Alerts, Prometheus Rule Groups, Action Groups, Alert Processing Rules, and Diagnostic Settings.
- Built and maintained secure **Azure Landing Zones** implementing enterprise networking, identity, governance, Management Groups, subscriptions, connectivity, and compliance controls to support scalable and resilient cloud environments.
- Implemented enterprise Azure governance using Management Groups, **Azure Policy**, **RBAC**, Resource Locks, Subscription Governance, Resource Providers, and Tagging Standards while administering shared Azure subscriptions and resource groups.
- Administered and optimized **Azure Kubernetes Service (AKS)** clusters including node pools, **Azure CNI**, RBAC, Network Policies, Ingress Controllers, Workload Identity, Managed Identity, container security, autoscaling, and GitOps deployments using ArgoCD, Helm, Rancher, and Kustomize.
- Implemented **Azure Cost** Management budgets, cost alerts, and governance policies while leveraging Cloudability dashboards to optimize Azure resource utilization, cloud spend, and FinOps reporting.
- Built enterprise observability solutions using Azure Monitor, Prometheus, Grafana, Dynatrace, Datadog, Application Insights, Log Analytics, OpenTelemetry, and Kusto Query Language (KQL) for proactive monitoring, incident analysis, and performance optimization.
- Implemented Loki-based centralized logging for AKS using Fluent Bit and **Azure Storage**, integrating Grafana dashboards for Kubernetes log analytics and reducing Mean Time to Resolution (MTTR).
- Administered Microsoft Entra ID including App Registrations, Enterprise Applications, Service Principals (SPNs), Managed Identities, RBAC assignments, and federated identity configurations supporting secure authentication and Azure resource access.
- Managed Azure **Key Vault** for secure storage of secrets, certificates, keys, ServiceNow webhook URLs, Logic App connections, AI model endpoints, and application credentials using RBAC and Managed Identities.
- Provisioned and supported Azure **AI Foundry** environments by deploying Azure OpenAI and Anthropic Claude models, configuring Azure AI Services (Cognitive Services), networking, Azure Key Vault integration, Managed Identities, and secure **API access** for enterprise AI workloads.
- Configured Azure Monitor Action Groups, Alert Processing Rules, **Logic Apps**, and ServiceNow integrations to automate alert routing, incident creation, escalation workflows, and operational notifications across Microsoft Teams, Outlook, PagerDuty, and Slack.
- Developed custom workflows using Power Platform, **Power Apps**, Logic Apps, Power Automate, and Microsoft Teams Workflows to automate operational notifications and improve engineering collaboration.
- Provisioned and supported **Azure Data Factory (ADF)** and **Azure Databricks (ADB)** environments including Integration Runtimes, pipeline orchestration, cluster management, networking, monitoring, and operational support.
- Configured and supported Azure networking components including Private Link, **Private Endpoints**, Private DNS Zones, **Application Gateway**, Azure **Front Door**, **Load Balancers**, Virtual Networks, **NSGs**, and Service Bus integrations for secure enterprise connectivity.
- Provisioned AWS infrastructure for AI proof-of-concept initiatives by deploying Amazon Bedrock services, IAM, networking, and supporting cloud resources using Infrastructure-as-Code and DevOps automation.
- Implemented Business Continuity Planning (**BCP**) monitoring by configuring Azure Monitor alerts, Action Groups, failover and failback validation, and operational readiness across production Azure environments.

- Provided 24x7 production support while leading the **SRE** on-call team, coordinating incident response, mentoring engineers, and driving Root Cause Analysis (**RCA**) to improve platform reliability.
- Developed reusable infrastructure templates, troubleshooting guides, architecture documentation, operational **runbooks**, and knowledge-sharing materials to standardize DevOps and Azure platform engineering practices.
- Acted as a DevOps Champion, mentoring engineering teams, developing **reusable infrastructure** templates and documentation, and driving secure cloud adoption within Agile delivery environments.

Client: CareFirst BCBS, MD, USA

May 2023 – Dec 2024

Role: Cloud/Infrastructure Engineer

Responsibilities

- Managed operations on multi-cloud platforms, including Azure Cloud Platform and AWS.
- Developed Shared ARM templates V2, stored in storage accounts, to enable application teams to efficiently deploy security measures and custom domain extensions.
- Managed Windows and Linux servers, resolved IP issues, and supported multiple application teams.
- Providing on-call support 24*7 weekends for the migration.
- Installing agents like Microsoft Monitoring Agent MMA, and OMS Linux agents using Automation scripts.
- Successfully deployed and managed Digital applications on Azure cloud technologies, transforming .Net applications to Microsoft Azure Cloud Service Project for seamless cloud deployment.
- Demonstrated extensive expertise in Azure App Services, including configuration, log management, and effective use of Kudu.
- Designed Karpenter provisioner policies with node affinity, taints, and tolerations to support workload-specific scaling requirements.
- Experienced in leveraging Azure DevOps for end-to-end application lifecycle management, including source code management, continuous integration (CI), continuous deployment (CD), and automated testing.
- Proficient in utilizing various Azure cloud services such as Azure Virtual Machines, Azure App Service, Azure Functions, Azure Logic Apps, Azure Storage, and Azure SQL Database.
- Experience in deploying .NET applications on various platforms, as well as integrating CI/CD pipelines using tools like Azure DevOps, and GitHub Actions.
- Managed application lifecycle using Helm releases, including upgrades, rollbacks, and version control.
- Utilized Azure Kubernetes Services (AKS) and Docker to create a runtime environment for the Continuous Integration/Continuous Deployment system, enabling seamless build, test, and deployment processes. Also, established Jenkins jobs to deploy applications to the Elastic Kubernetes Service (EKS).
- Proficiently executed Azure (IaaS) migrations, including creating Azure VMs, storage accounts, VHDs, and storage pools, and migrating on-premises servers to Azure. Also, implemented availability sets and ensured VM hardening and disk encryption using the KEK key in MS Azure.
- Executed CI/CD pipeline for AKS using Helm charts in Azure DevOps and GitHub Actions.
- Monitored and optimized the performance of Databricks clusters by analyzing CPU usage, memory usage, and network traffic, and fine-tuning configurations to meet workload demands.
- Proficient in handling Windows Azure IaaS components such as Virtual Networks, Virtual Machines, Cloud Services, Resource Groups, Express Routes, VPN, Load Balancing, Application Gateways, Auto-Scaling, and Traffic Manager.
- Implemented CI/CD pipelines for automated testing and deployment of Order Management System (OMS) software releases, reducing manual effort and accelerating time to market.
- Expertise in configuring Azure web apps, Azure App Services, Azure Application Insights, Azure Application Gateway, Azure DNS, Azure Traffic Manager, Azure Network Watcher, Implementing Azure Site Recovery, Azure Backup, and Azure Automation.

- Utilized Azure Kubernetes Service (AKS) to implement Jenkins pipelines, driving microservices builds and deployments to Kubernetes.
- Configured and managed secure data sharing in Snowflake, enabling seamless data collaboration across different business units and external partners.
- Familiarity with integrating Azure Cosmos DB with other Azure services and tools, such as Azure Functions, Logic Apps, and Power BI, to build end-to-end data solutions.
- Skilled in managing continuous integration and deployment (CI/CD) pipelines for multiple Databricks projects, ensuring high availability and reliability of data processing workflows.
- Implemented monitoring and alerting mechanisms for Databricks workloads and resources. This includes setting up monitoring tools, defining metrics and alerts, and integrating with Azure Monitor or other monitoring solutions.
- Proficient in setting up monitoring and logging solutions using Azure Monitor, Application Insights, and Log Analytics to gain insights into application performance and resource utilization.
- Provided 24/7 on-call support for migration, including the installation of monitoring agents like Microsoft Monitoring Agent (MMA) and OMS Linux agents using automation scripts.

Environment: Azure, Azure DevOps, Active directory users, and computers, Azure CLI, ACS, AKS, Datadog, Git, Maven, Splunk, Nagios, Java/J2EE, Linux, Cosmos DB, RedHat, Ubuntu, Microsoft SQL Server, Microsoft Visual Studio, Data Factory, Docker, Kubernetes, Function Apps, Web Apps, Automation Accounts, Logic Apps, IAM, Windows PowerShell, JSON, GitHub Actions, Ansible, YAML.

Client: Zurich Insurance, Fresno, CA, USA

July 2021 – April 2023

Role: DevOps Engineer

Responsibilities:

- Worked on Azure Cloud Platform with Kanban Methodology.
- Corteva Azure Architecture is Read Only through Portal. Utilized PIM for troubleshooting critical application issues. Creation of resources will be through the Azure DevOps release pipeline using the contributor SPN role (Iac).
- Integrated GitOps pipelines with Terraform and Helm to manage infrastructure and application deployments through version-controlled repositories.
- Designed and configured Azure Virtual Networks (V-Nets), Subnets, Azure Network Security Groups, DNS Settings, Security policies, and Routing.
- Written runbooks in PowerShell and deployed using CICD Az DevOps to automate accounts. Release pipelines use Azure AD Application Registration service principal in the Azure DevOps service connections for authentication to Azure. Runbook uses connections for Authentication.
- Implemented custom application support RBAC role and written automation script for assigning this role to specific environments based on PROD and Non-PROD resource groups.
- Effectively using Log Analytics workspace and good understanding/experience with Kusto Query Language.
- Implemented Continuous Delivery pipeline with GitHub, Jenkins, Docker, and Kubernetes. whenever a new GitHub branch gets started in Jenkins, the CI server automatically attempts to build a new Docker container from it and deploy those containers onto AKS.
- Managing the Azure Kubernetes Services (AKS) policies, providing access to different Azure resources, and developing and improving the workflows that govern access.
- Developed and maintained Continuous Integration (CI) using tools in Azure DevOps (VSTS) spanning multiple environments, enabling teams to safely deploy code in Azure Kubernetes Services (AKS) using YAML scripts and HELM charts.

- Managed Databricks workspaces, including user access control, workspace configuration, and integration with Active Directory for SSO (Single Sign-On) and RBAC (Role-Based Access Control).
- Automated the provisioning and configuration of Snowflake environments using Infrastructure as Code (IaC) tools like Terraform.
- configuring database-level security settings, creating users and roles, and implementing access controls to ensure that only authorized users have access to the correct schema in Azure Cosmos DB.
- Created and configured monitoring alerts for an Azure app service resource and integrated them into Azure app insights.
- Established robust monitoring and alerting mechanisms for OMS platforms using Prometheus and Grafana, enabling proactive identification and resolution of performance issues.
- Written Automation scripts in PowerShell, which make API calls to Azure DevOps and find users who have not accessed Azure DevOps for more than 90 days (Cost Optimization Project).
- Involved in creating cookie-cutter templates in several applications (Python, Java, Golang, .Net, and Node.js) and helped in bash Script for inflating the project structure.
- Installing Microsoft Monitoring Agent MMA/OMS using Automation scripts.
- Implementing custom RBAC roles and assigning Role Based Access Controls (IAM) for users and groups using Automation and managing permissions.
- Configured Cloud Network Architecture using Azure Virtual Networks, VPN, and Express Route to establish connectivity between on-premises and Cloud.
- Configured NetApp File Shares in Central US and assigned volumes to multiple applications.
- Developing PowerShell scripts and ARM templates to automate the provisioning and deployment process.
- Handling escalated support tickets till closure for MS Azure IaaS platform.

Environment: Microsoft Windows Azure, Windows Server 2008/2012R2/2016, RedHat, Ubuntu, Microsoft SQL Server, Microsoft Visual Studio, Data Factory, Jenkins, Docker, Kubernetes, Ansible, Terraform, Function Apps (.Net Core and C#), Web Apps, Automation Accounts, Logic Apps, IAM, Windows PowerShell, JSON, Shell.

Client: JP Morgan Chase, Plano TX, USA

May 2019 – June 2021

Role: SRE/DevOps Engineer

Responsibilities:

- Worked on Agile Methodology and tools area (Code Management and build and release automation and service and incident management).
- Developed Terraform modules to create a DynamoDB table and used Python code to insert the data into the DynamoDB table and used the AWS Lambda Function to scan the registration table to determine the project that needs a Metrics collector and stores into AWS Elastic Search (Kibana).
- Implemented AWS Elastic Search Cluster using Terraform Module. Developed Python code by using Boto3 and NumPy Libraries to Onboard all the Team projects from the GitLab to check the metrics in the Kibana dashboard for log analytics and integrated with AWS lambda and Cloud Watch logs by setting up Cron jobs.
- Integrated AWS DynamoDB with Lambda to scan the Onboarding and Decommission Accounts, created Cron jobs for initiating our daily batch data pulls, executed our continuous integration tests done under Gitlab CICD & backed up the Dynamo DB streams.
- Worked on Black Duck to scan the Vulnerability for security risk, license risk, operational risk, etc, Integrated AWS Lambda with Amazon Kinesis. Worked on AWS Data Pipeline to configure data loads from S3 to Redshift.
- Developed data transition programs from DynamoDB to AWS Redshift (ETL Process) using AWS Lambda by creating functions in Python for certain events based on use cases. Worked on AWS SQS to consume the data from S3 buckets. Imported the data from different sources like AWS S3 and local file systems into Spark RDD.

- Deployed and optimized two-tier Java, Python web applications to AWS DevOps CI/CD to focus on development by using services such as Repos to commit codes, Test Plans to unit test, deploy App Service, AWS Application Insight collects health performance and usage data of the process, stored artifacts in blob storages.
- Creating Python scripts to automate daily networking tasks (Ex. auto config generation, retrieving information from network devices, parsing data, etc.) - including a custom FortiGate firewall config generator (which included multi-threaded functionality to generate configs for multiple firewalls at once).
- Developed Terraform module to create a managed cluster on AWS EKS autoscaling group of worker nodes with associated VPC, Internet gateway, IAM Roles and Policies, Security Groups, and Subnets. Installed Kubectl, iam-authenticator, AWS-auth, and configured kube config to maintain master node on Clusters.
- Improved ROI by establishing a true DevSecOps culture, introducing automation, Jenkins pipeline development, Configuration Management (Chef), and streamlining technical and business processes across the organization.
- Created automated pipelines in AWS Code Pipeline to deploy docker containers in AWS ECS using services like Cloud Formation, Code Commit, Code Build, and Code Deploy.
- Implemented a Continuous Delivery Pipeline with Docker, Jenkins, and GitHub and Whenever new GitHub branches are created Jenkins automatically attempts to build a new Docker container from it.
- Worked on Open-source development tools like Docker Containers and Kubernetes. Deployed Kubernetes cluster in production using Terraform scripts and Troubleshooted networking-related issues. Supported provisioning by creating and configuring virtual development environments using HashiCorp.
- Created Docker images from scratch and customized them as per the requirement, working on Docker containers, and Snapshots, managing Docker volumes, and directory structure, and removing Docker images. Developed Networking policies for Docker Containers.
- Configured applications that run Multi-container Docker applications by utilizing the Docker-Compose tool which uses a file configured in YAML format. Used Kubernetes to manage containerized applications using its nodes, Config-Maps, selector, Services, and deployed application containers as Pods.
- Implemented Python code for creating an automated AWS Code Pipeline to build and deploy into ECR and Lambda by using a source S3, getting the Zip file from Gitlab CICD.
- Involved in creating cookie-cutter templates in several applications (Python, Java, Golang, .Net, and Node.js) and helped in bash Script for inflating the project structure.
- Created, deployed, and managed Linux and Windows VMs using Red Hat Enterprise Virtualization Manager, which includes moving and migrating VMs from one cluster to another cluster.

Environment: AWS (Lambda, DynamoDB, AWS Code Pipeline, Code Star, RedShift, CloudWatch, ELK, S3, CloudFormation), Terraform, Kubernetes, Docker, GitLab CICD, Java, .Net, Git, Python, YAML, Nagios, JIRA, Linux.

Client: BTS Software Solutions, Fort Meade, MD.

June 2017 – Apr 2019

Role: DevOps Engineer

Responsibilities:

- Automated uploading of the worker images from the local machines to S3 buckets using terraform scripts analyzed the patterns of the images using AWS Recognition and stored the results inside high-priority S3 buckets.
- Built AWS Cloud Formation templates to create custom sized VPC, subnets, and NAT to ensure successful deployment of Web applications and database templates and orchestrated the setup of EC2 instances, skilfully configuring security groups to establish a secure and optimized environment for application deployment.
- Setting up databases in AWS using the S3 bucket and configuring instance backups to the S3 bucket.

- Worked with Terraform templates for automating VPCs, ELBs, security groups, SQS queues, and S3 buckets, and continued to replace the rest of our infrastructure with YAML configuration language. I also Converted the existing AWS infrastructure to serverless architecture with AWS Lambda.
- Generated AWS Multi-Factor Authentication (MFA) for instance SSH login, worked with teams to lock down security groups, and created IAM roles so AWS resources can securely interact with other AWS.
- Created Python scripts to automate AWS Services which includes ELB, Cloud front, Lambda, database security, and application configuration also Developed them to take backup of EBS volumes using AWS Lambda, and CloudWatch.
- Implemented and maintained the monitoring and alerting of production and corporate servers/storage using AWS Cloud Watch and maintained the logs using AWS CloudTrail.
- Refined automation components with scripting and configuration management using Ansible.
- Wrote Ansible playbooks from scratch in YAML. Installing, setting up, and troubleshooting Ansible, created and automated platform environment setup.
- Installed packages using YUM and Red Hat Package Manager (RPM) on various servers. Used Apache Tomcat for deploying the Java Web Applications
- Experience in Designing, Installing, and Implementing Ansible configuration management systems and in writing playbooks for Ansible and deploying applications.
- Configured and administered Jenkins pipelines for automated builds and was responsible for installing Jenkins master and slave nodes.
- Designed and created multiple deployment strategies using CI/CD Pipelines using Jenkins. Installed multiple plugins to Jenkins and configured Proxy to get auto updates.

Client: Comcast, Philadelphia, PA.

Dec 2014 to Jan 2017

Role: Linux System Administrator

- Installation, Maintenance, Administration, and troubleshooting of Sun Solaris 8,9 and Red Hat 9, AS 3.0 servers on various hardware platforms that include Sun 4800, V480, 280R, 4500, 3500, Dell 6400, 2400, 1800, etc.
- Performed automated installations of Operating systems using Jumpstart for Solaris and Kickstart for Linux.
- Configured firewall based on RedHat Linux and FreeBSD 4. x that has three network interfaces.
- Configuration and administration of Linux application servers, X-terminals, and Diskless Workstations. Providing day-to-day user administration like adding/deleting users and managing users' queries. Shell programming for routine administration tasks. Analyzing monitoring system performance through various system tools such as Netstat, and iostat.
